Printer

## Declare

## **About Trademark**

Corporation names and product names are the registered trademarks or commodity names of the corporation.

- \* EPSON and ESC/POS are the registered trademarks of Seiko Epson Corporation.
- \* Star is a registered trademark of STAR MICRONICS CO.,LTD.
- \* Windows is a registered trademark of Microsoft Corporation.

## Warnings, Cautions, and Notes

Pay attention to the following promises when using this manual:

## Warning:

Warnings must be followed carefully to avoid bodily injury.

## Caution:

Cautions must be observed to avoid damage to your equipment.

## Note:

Notes contain important information and useful tips on the operation of your printer.

## **Important Safety Instructions**

Read all of these instructions carefully and thoroughly and save them for later reference. The unauthorized operation would lead to malfunction or accident. Manufacturers have no responsibilities for the problems which are led by unauthorized operations.

- 1. Follow all warnings and instructions in the manual as well as marked on the product.
- 2. Don't touch the thermal print head with your hand at any moment to avoid the thermal head damaged.
- 3. Be careful the manual cutter when you are installing the paper.
- 4. Unplug this product from the power outlet before cleaning. Do not use the chemicals like alcohol to clean the printer. Use a damp cloth for cleaning.
- 5. Please don't use the printer near water.
- 6. Slots and opening on the cabinet and the back or bottom are provided for ventilation. To ensure reliable operation of the product and to protect it from overheating, do not block or cover these openings. And do not place the printer on a bed, sofa, rug or other similar surface in case of blocking the openings. This product should not be placed in a crowded environment unless proper ventilation is provided.
- 7. Make sure the printer is put on a stable surface and the surrounding is wide enough for paper load and eject.
- 8. Avoid using the same AC socket with other high-power electric appliances or the electric appliance device which will easily cause voltage fluctuation.
- 9. The whole computer system should be far away from the devices which may easily cause electromagnetic interference, for example, loudspeaker or wireless component.
- 10. Do not locate this product where the cord will be stepped on. When the cord or the plug is mangled, please stop using and get a new one replaced. Make sure the old one is far away from the printer, so it can avoid someone who does not know the inside story getting damaged.
- 11. This product should never be placed near or over a radiator or heat origin, and should avoid of direct sunshine.
- 12. Never push objects of any kind into this product though cabinet slots as they may touch dangerous voltage dots or short out parts.
- 13. Don't remove the printer's out-cover and repair the printer. When needed, call or take it to the professional.
- 14. Make sure the power is off before connecting or unplugging the power cord and the cables.
- 15. To ensure safety, please unplug this product prior to leave it unused for an extended period. The wall outlet you plan to connect to should be nearby and unobstructed.
- 16. Unplug this product from the power outlet and leave servicing to qualified service personnel under the following conditions:
  - A. When the power cord or plug is damaged or frayed.
  - B. If liquid has been spilled into the product.
  - C. If the product has been exposed to rain or water.
  - D. If the product does not operate normally when the operating instructions are followed.
  - E. If the product has been dropped or the cabinet has been damaged.

F. If the product exhibits a distinct change in performance, it indicates a need for service.

#### Note: The contents of this manual are subject to change without notice.

\*All the parts of the printer can be recycled. When it is abandoned, we can call it back freely. Please contact us when you abandon it.

Note: In order to ensure the printer life, strictly prohibit printing full line and full black exceeding 2 CM.

## Chapter 1 Overview

## 1.1 Features

CODESOFT PL-330 is a high-speed thermal printer. It is a high-quality, high-reliability and low-noise POS printer without ribbon. It's small, easily-operated and can be widely used in ECR, PC-POS and BANK POS for printing a variety of receipts.

## **1.2 Product Model Description**

In order to fulfill different requirements and operating circumstance, manufacturer develops CODESOFT PL-330 series products which are high-speed thermal mini-printers.

CODESOFT PL-330 series products are equipped with auto cutter, so that customer could select full cut or partial cut.

## Interface:

CODESOFT PL-330 series products are configured with cash drawer interface, you can choose one of the following data interfaces when purchasing this product:

- Parallel interface (PL-330D)
- USB interface (PL-330S)
- USB interface + Serial interface (PL-330US)
- USB interface + Ethernet interface (PL-330UE)
- USB interface + Serial interface + Ethernet interface (PL-330USE)
- USB interface + Bluetooth (PL-330UB)
- Wi-Fi (PL-330W)

Note: Please contact the local dealer to change the interface if needed with added expense.

## 1.3 Main Parts of the Printer

Figure 1-1 Main parts of the printer

## **Chapter 2 Installing the Printer**

## 2.1 Unpacking and Checking

Check the following items in the package, if any of these items is missing, please contact your dealer.

Note: 1. Models with Bluetooth and Wi-Fi are not equipped with interface cable. 2. Roll paper guide is equipped according to the necessity of the customers.

## 2.2 Removing the Protective Materials

- 1. Open the packing box, take out the printer.
- 2. Save all the original packing materials so that they can be used when transporting the printer in the future.

## 2.3 Connecting to Your Computer or Other Equipment

The printer is configured with a cash drawer interface and one data interface (you can select Parallel interface, USB interface, USB interface + Serial interface, USB interface + Ethernet interface, USB interface + Serial interface + Ethernet interface, USB interface + Bluetooth or Wi-Fi). Please take the specific interface as standard. Connect the printer to your computer with the correct cable.

Note: Before connecting the cash drawer cable, parallel cable or serial cable, make sure that the power of the printer is turned off. Only after tightening the cable may you turn on the printer. Or else the printer may be damaged.

## 2.3.1 Connecting the Cash Drawer Cable

Turn off the printer and plug one end of the cash drawer cable into the cash drawer interface of the printer and the other end to the cash drawer. (As shown in Figure 2-2)

Figure 2-2 Connecting the cash drawer cable

Caution: Please use the appropriate cash drawer. Manufacturer will not honor warranty when using unauthorized cash drawer.

## 2.3.2 Connecting the Parallel Cable

1. Make sure the computer and the printer are both turned off, plug the parallel cable to the parallel interface of the printer, Squeeze the wire clips on both sides and make the connector fixed. (As shown in Figure 2-3)

Figure 2-3 Connecting the parallel cable

2. Plug the other end of the cable to the computer. Tighten the screws on both sides and make the cable fixed.

## 2.3.3 Connecting the USB Cable

- 1. Plug the USB cable A end (flat shape) into the computer's USB interface.
- 2. Plug the USB cable B end (square shape) into the printer's USB interface. (As shown in Figure 2-4)

Note: Please don't impact the plug after connecting USB cable.

Figure 2-4 Connecting the USB cable

## 2.3.4 Connecting the Serial Cable

1. Make sure the computer and the printer are both turned off, plug the serial cable to the serial interface of the printer. Tighten the screws on both sides and make the cable fixed (as shown in Figure 2-5).

Figure 2-5 Connecting the serial cable

2. Plug the other end of the cable to the computer's serial interface. Tighten the screws on both sides and make the cable fixed

## 2.3.5 Connecting the Ethernet Cable

Plug the crystal end of the Ethernet cable (RJ-45) into the printer's Ethernet interface and the other end to the LAN (as shown in Figure 2-6).

Note: Please refer to the user's manual for detailed instructions of network settings.

## 2.4 Connecting the Power

- 1. Make sure the printer is turned off. (The pressed down side on the switch with "O" mark denotes the printer is off)
- 2. Make sure the voltage of the electrical outlet matches that of the AC adapter.
- 3. Plug the AC adapter to the printer's power supply inlet.
- 4. Plug one end of power cord into the AC adapter, and then plug the other end of the power cord into the grounded electrical outlet.

Figure 2-7 Connecting the power

- Warning: 1. If the rated voltage doesn't match the outlet voltage, contact your dealer for assistance. Do not plug the power cord to electrical outlet.
  - 2. Please use the electrical outlet connecting the ground properly.
  - 3. Please use the original AC adapter only. Manufacturers have no responsibilities for the problems which are led by using unauthorized AC adapter.

## 2.5 Installing the Driver

Please use the cable to connect computer with printer, then turn on the computer and the printer, put the driver CD into the CD-ROM. Install driver by the following ways:

## 2.5.1 Auto-installing Way (Recommended)

Double click the file "Setup.exe" in the driver disc, install driver by the guide.

Note: Auto-installing way needs the operating systems of Windows2000 and above and the operating systems of Window 98/ME and below are not supported.

## 2.5.2 Hand-operated Installing Way

Note: This installing way is used for the people who have some knowledge on hand-operated installing and equipment application.

#### 2.5.2.1 The Operating Systems of Windows 2000/XP/Vista/Win7

#### (1) The hand-operated installing steps of parallel interface or serial interface:

The following steps are used Windows XP as an example. There are slight differences among different operating systems. The installing way with other operating systems depends on the practical installing process.

1 Click "Start"  $\rightarrow$  "Settings"  $\rightarrow$  "Select Printers".

- 2. Click "Add Printer", then it pops up a window of "Add Printer Wizard", click "Next", then please read the select guide carefully, such as, select "Local printer" in the "Local or Network Printer" window, then click "Next".
- 3. A window of "Select a Printer Port" pops up, according to your requirement, select "LPT1: (Recommended Printer Port)" or serial interface, click "Next".
- 4. A window of "Install Printer Software" pops up, click "Have Disk...".
- 5. A window of "Install From Disk" pops up. Please according to the operating system environment, you should select the path as follows: CD-ROM → "Drivers" → "WIN2000 (XP-Vista-Win7)", click "Open", then click "OK" to return to the window of "Install Printer Software", click "Next".
- 6. Follow the guide and click "Next" gradually till the installation is finished.

#### (2) The hand-operated installing steps of USB interface:

The following steps are used Windows XP as an example. There are slight differences among different operating systems. The installing way with other operating systems depends on the practical installing process.

- 1. Connect with the USB cable and turn on both the computer and the printer. After the computer finds out new hardware, and a window of "Found New Hardware" pops up "Welcome to the new hardware wizard".
- 2. Select the "Set from the list or specific position", then click "Next"
- 3. A window of "Please choose your search and installation options" pops up, choose "Don't search, I will choose the driver to install", click "Next".
- 4. A window of "Add Printer Wizard" pops up, click "Have Disk...".
- 5. A window of "Install From Disk" pops up. Please according to the operating system environment, you should select the path as follows: CD-ROM → "Drivers" → "WIN2000 (XP-Vista-Win7)", click "Open", then click "OK" to return to the window of "Add Printer Wizard", click "Next".
- 6. Follow the guide and click "Next" gradually till the installation is finished.

#### 2.5.2.2 The Operating System of Windows 8/Windows 10

The hand-operated installing steps of parallel interface, serial interface or USB interface:

- 1. Enter "Control Panel"  $\rightarrow$  "Device and Printers".
- 2. Click "Add Printer", then a window of "Add Printer Wizard" pops up, select "Add Local printer Manually" in the "Local or Network Printer" window.
- 3. A window of "Select a Printer Port" pops up, according to your requirement, click "Use the Current Port", select "LPT1: (Printer Port)", serial interface or USB interface, click "Next".
- 4. A window of "Install Printer Driver" pops up, click "Have Disk...".
- 5. A window of "Install From Disk" pops up. Please according to the operating system environment, you should select the path as follows: CD-ROM → "Drivers" → "WIN8(WIN10)", click "Open", then click "OK" to return to the window of "Install Printer Driver", click "Next".
- 6. Follow the guide and click "Next" gradually till the installation is finished.

## 2.6 Selecting the Cutter

Please install the driver following the setup description in the CD going along with the printer. What's more, you can use the TM-T88II, TM-T88III series driver from EPSON.

If you want to cut the paper after printing each page, please select "cut" or "no cut" in the "Paper Source" of "Paper/Quality" page after clicking the "Printing Preferences" button, which lies in the "General" page of the driver properties (as shown below).

Note: if paper cut effect is the same whichever you select "full cut" or "partial cut" in the driver properties, it means that the cutter (the printer equipped with) can only carry out one kind of cut-methods.

General	OFT PL-330 Propert	ies ced Device Settings 🔅 Printer settings	2 🗙

## 2.7 Installing the Bluetooth Interface Driver

Note: Select to install this driver according to the chosen model.

- 1. Choose the appropriate Bluetooth adapter, the operation system is Window XP or above which is with Bluetooth adapter driver.
- 2. Turn on the printer, search Bluetooth devices in Window XP system, and click "Add".

Bluetooth Devices	×
Devices Options COM Ports Hardware	
Add <u>R</u> emove <u>Properties</u>	s

	The Bluetooth device was successfully connected to your computer. Your computer and the device can communicate whenever they are near each other.		
	These are the COM (serial) ports assigned to your device.		
	Outgoing COM port: COM3		
	Learn more about <u>Bluetooth COM ports</u> .		
	To close this wizard, click Finish.		
	< Back Finish Cancel		

7. Set the printer driver print port as the outgoing port and the installation is finished.

Note: Every Bluetooth device has its own address. Please reinstall it when replacing the Bluetooth device.

## 2.8 Ethernet Settings

Note: The network printing function needs the operation systems of Windows2000 and above and the operation systems of Window 98/ME and below are not supported.

## 2.8.1 Connecting the Printer

Power on the printer, connect with the Ethernet interface cable which has been connected to LAN, and look into the information of Ethernet LED to ensure the printer has entered the normal connection.

Orange LED	Green LED	Description
On	Blink	Online
Off	Off	Offline

## 2.8.2 Setting IP Address

## 1. Running NetFinder Software

Double click NetFinder.exe in the PC which connects the printer in the same LAN. The figure of the software is shown as follows:

Button description:

Exit — Exit from the software

Search — Search printers in the same LAN

Assign IP — Modify the IP address and other settings for the specified printer.

#### 2. Searching the Printer

Click "Search" button in the main interface, the dialog box appearing will begin searching automatically and displays the status, listing a printer in the main interface if found. The time is counting down in the progress bar (10s in total) and the search will finish as soon as the time is over. If you need to go on searching, press "Search" button again.

	NetFinder
(MODEL) {DESCRIPTION}	IP Address: 192.168.0.240 [Static] MAC Address: 20-2C-B7-00-3F-03
Search	time left 6 second(s)
found 1 device(s)	Reload Timer      Close this window when searching completes      Stop      OK

If the printer connects correctly, the IP address can be found in a search period.

If the printer still can not be found out when the network connection is correct in the same network. Please check whether the network fire wall on the PC is open or not. If there is fire wall, please close it temporarily, open again after finish searching and setting the printer completely.

#### 3. Setting Printer's IP Address

The printer's information is listed in the main interface, the left side of which is the model and description and the right are the IP address and MAC address. What's more, the assign mode (dynamic/static) is noted behind the IP address.

#### 1) Correlative description for IP address settings

In order to search and set printer's IP address conveniently for the first time, the factory default setting is DHCP mode which assigns IP address dynamically. If there is no DHCP server in the connected LAN but printer is set to DHCP mode, then it will use the internal pre-set address (IP: 10.0.0.1, Subnet Mask: 255.255.255.0) automatically.

It is suggested that printer's IP is set to static in actual usage, which can cut down the time when initializing the Ethernet interface as the printer is turned on and prevent IP conflicts (The dynamic address used in printer may conflict with another one). The network segment part of the IP address and Subnet Mask must be the same as those of PC connecting with a printer. For example, the address of working PC is 192.168.0.1/255.255.255.0 (IP/Subnet Mask), then which of printer should be set to 192.168.0.x/255.255.255.0 (x=2~254 and should avoid the occupied IP). It is not restricted for NetFinder to search printers in the same network but different segment parts (can not stride gateway). Relative glossary of IP address may refer to corresponding information.

#### 2) Setting printer's IP address

Select the printer information to be modified (black frame appears), click "Assign IP" button. Set the IP in the dialog box appearing.

Assign IP Address		×		
IP:	192 . 168 . 7 . 65	OK Cancel		
Subnet Mask:	255 . 255 . 248 . 0	Default setting		
Default Gateway:	255 , 255 , 255 , 255			
	🔽 Use	DHCP		
<ul> <li>Reload Timer</li> <li>Close this window on success</li> </ul>				
10 seconds remaining				

Check the "Use DHCP" if needed to assign dynamic address, the settings above will be disabled automatically. Please make sure there is a DHCP server in the network, or the printer can not receive an effective IP address.

When to specify static address, uncheck "Use DHCP" and fill in "IP address", "Subnet Mask" and "Default Gateway". If there is no gateway in the network, fill 255.255.255.255 in the "Default gateway". "IP address" and "Subnet Mask" should obey the assigning rules of local LAN (Ethernet), please enquire the administrator of networks which the printer connects to for more details.

Click "OK" to send address setting information to the specified printer. Click "Cancel" if you abandon the modification.

Click "Search" in the main interface again to update printer information after modifying the printer's IP address and restarting the printer.

#### 3) Record printer's IP address

Record the printer's IP address, which will be used in the section "Newly-install printer network driver" or "Upgrade-install printer network driver (setting driver's network port)".

## 2.9 Wi-Fi Setting

## 2.9.1 Connecting the Printer

Wireless Printer is taken as an example to respectively describe the connection of Windows, Android and iOS operation systems. Please make the connection according to the operating guide of the current system, and skip to the next chapter "**Wi-Fi Parameters Description**" when the connection is successfully.

#### (1) Connecting to the equipment in Windows

Take Windows XP operating system as an example to show how to connect the printer with the equipment in Windows system.

- 1. Turn on the printer and make sure the printer is in normal working condition. Start the operation 30 seconds after the printer is on.
- 2. Right click "My Network Places", and then click "Properties" to find the "Local Area Connection 2". Double click it and the window of "Wireless Network Connection" pops up, select and double click the corresponding printer Wi-Fi name. The printer Wi-Fi default name is composed of "the printer model+6 numbers and letters" (as shown in Figure 1).

Figure 1

#### (2) Connecting to the equipment in Android

Take the mobile phone of Android 4.4 as an example to show how to connect the printer with the equipment in Android.

- 1. Turn on the printer and make sure the printer is in normal working condition. Start the operation 30 seconds after the printer is on.
- Click "Settings" and the interface pops up. Select the "WLAN" function to "ON", then click the printer Wi-Fi searched by the mobile phone to connect. The printer Wi-Fi default name is composed of "the printer model+6 numbers and letters" (as shown in Figure 2).

Figure 2

## (3) Connecting to the equipment in iOS

Take the mobile phone of iOS 8.1 as an example to show how to connect the printer with the equipment in iOS.

- 1. Turn on the printer; make sure the printer is in normal working condition. Start the operation 30 seconds after the printer is on.
- 2. Click "Settings" and the interface pops up. Select the "WLAN" function to "ON", then click the printer Wi-Fi searched by the mobile phone to connect. The printer Wi-Fi default name is composed of "the printer model+6 numbers and letters" (as shown in Figure 3).

Figure 3

## 2.9.2 Wi-Fi Parameters Description

After connecting the equipment with the printer through wireless network, please import <u>http://10.10.10.1</u> in the browser address bar and enter, then the setting interface pops up. The display style of setting interface may differ in different systems, but the parameter items are the same. Take Windows XP as an example in the following, as shown in Figure 4.

#### (1) Printer-equipment connected printing

Printer-equipment connected printing is a way of printing which uses printer as the hotspot and connects the wireless equipment for printing.

"Wireless Settings" is the relevant setting parameter when the printer is as the hotspot (as shown in Figure 6). In the printer-equipment connected printing mode, the parameters of the wireless equipment must match that of the printer so as to make the communication successful. Please record the relevant parameters and fill them in the wireless equipment correctly.

After you finish resetting the parameters in the setting column, click "Apply" on the upper side of "Update Firmware". Then the countdown interface of saving the modification appears and the wireless equipment can conduct communications with the printer as soon as the countdown is over.

#### **Description in "Wireless Settings"**

- **BSSID:** The address of the printer wireless card in the "Wireless Settings", which is the MAC address (Valid when it's in printer-equipment connected printing).
- **Network Name (SSID):** The network name of the printer wireless card. You can modify it if necessary, but you have to connect the network again after modifying.
- **IP Address:** The IP address of the printer wireless card. You can modify it if necessary, but you need to enter the browser with the new IP after modifying.

Subnet Mask: The subnet mask of the printer wireless card. You can modify it if necessary.

Security Mode: The security mode of the printer wireless card. You can modify it if necessary.

If the connection between printer and computer is exceptional, please restart the printer or modify "Channel' in "AP Client".

#### (2) AP connected printing

AP connected printing is a way of printing which connects the printer with the wireless equipment by the outer hotspot.

"AP Client" (as shown in Figure 7) includes the setting parameters of AP connection. Please fill in the information of current outer hotspot in the corresponding place. The parameters of the printer should match that of the current outer hotspot so as to make the communication successful. Please input them correctly.

	AP Client

	Apply

Figure 7

#### Description in "AP Client"

- **BSSID:** The address of the printer wireless card in "AP Client", which is the MAC address. (Valid when it's in AP connected printing)
- **Channel:** Select the corresponding channel according to the hotspot setting (Automatic is recommended).
- **SSID:** The Wi-Fi name of the current hotspot.

Security Mode: Select the corresponding security mode according to the hotspot setting.

Encrypt Type: Select the corresponding encrypt type according to the hotspot setting.

#### Acquiring and Setting the Security Mode and Encrypt Type

There are three ways to acquire security mode and encrypt type:

- (1) Get the security mode and encrypt type according to the corresponding network information given by the network administrator.
- (2) Find them by entering the router of hotspot with the administrator's account.
- (3) Find them through Windows operating system and the steps are shown below (Take WIN XP as an example):
- ① Right click "My Network Places", and click "Properties", then double click "Local Area Connection 2" (as shown in Figure 8).

My	/ Network Places	Double click it
an Sun	Open Explore Search for Computers Map Network Drive Disconnect Network Drive Create Shortcut Delete Rename Properties	Local Area Connection Limited or no connectivity, Fir VMware Accelerated AMD PCN
		Figure 8

② The dialog box "Wireless Network Connection Status" pops up, then click "Properties" (as shown in Figure 9).

(19) Wireless Network Connection Status	? 🗙

Figure 14

The setting of Security Mode and Encrypt Type

Refer to "**Connecting the Printer**", connect the wireless equipment with the printer and select the parameters acquired by the above steps in the "Security Mode" and "Encrypt Type" of the "**AP Client**".

Pass Phrase: The password of the hotspot

Address Assignment: It includes "DHCP (Auto config)" and "Static (Assigned IP)". You can select the corresponding assignment way according to your need. When selecting "DHCP (Auto config)", the IP Address and Subnet Mask can be acquired automatically (Click "Apply" and the system will assign automatically), and there is no need to set manually (as shown in Figure 15).

	AP Client
BSSID	CC:D2:9B:00:00:53
Channel	1 💌
SSID	WIFI001
Security Mode	WPA2PSK
Encrypt Type	AES 💌
Pass Phrase	•••••
Address Assignment	DHCP (Auto config)
IP Address	192.168.43.129
Subnet Mask	255.255.255.0

Figure 15

# Note: The green handshaking mark on the right side of the SSID column denotes the connection between the printer and the outer Wi-Fi hotspot is successful.

- **IP Address:** Set the IP address of the printer wireless card and the IP address should be in the same segment with the wireless networks you are using.
- **Subnet mask:** Set the subnet mask of the printer wireless card and the subnet mask should be the same with that of the wireless networks you are using.

Click "Apply" after all the parameters are set, then the countdown interface appears. When the time is over, disconnect the computer with the printer and connect the computer with the outer hotspot.

**Update Firmware:** Upgrade the wireless module of the printer (as shown in Figure 16), and you can ignore it if there is no need to upgrade.

Update Firmware		
Location:	Browse	
It takes about 1 minute to upload and upgrade flash and be patient please. Caution! A corrupted file will hang up the system.		
Apply		

Figure 16

## 2.9.3 Wi-Fi Interface Status Display and Parameters Reset

Wi-Fi interface is equipped with the "RESET button (Wi-Fi RESET)" and "LED indicator".

After turning on the printer, the Wi-Fi LED blinks fast, which denotes the interface is in the ON status. 30 seconds later, the Wi-Fi LED blinks slowly, which denotes the Wi-Fi interface is in normal working condition.

If user needs to restore the Wi-Fi parameters to factory default setting; just press the Wi-Fi RESET button to do it in a quick way. The method is as below:

- 1. Turn on the printer, wait for a few seconds until the Wi-Fi LED blinks slowly, and then press down the Wi-Fi RESET button for 2 seconds. Loosen the button and the LED blinks twice fast then blinks slowly again.
- 2. Reboot the printer and the factory default settings have been restored.

## 2.10 Mobile Equipment Wi-Fi Printing Function Application

The CODESOFT printer which is equipped with Wi-Fi interface supports the print service of Android system 4.4 or above version and the AirPrint wireless printing function of iPhone iOS system. After the Android mobile equipment has installed the CODESOFT print service plug-in, it can directly use the system print service to realize wireless printing; the iPhone iOS equipment does not need to install any plug-in.

#### Note: 1. Only if wireless printing function is supported by the APP can it be used.

## 2. The Android system must be 4.4 or above version and should have the complete Android Print function.

Wireless Printer which is equipped with Wi-Fi interface is taken as an example to describe printing application. Network name (SSID) is "Wireless Printer", IP Address is 10.10.10.1, Subnet Mask is 255.255.255.0 and Security Mode is "Disable". Turn on the printer and then conduct the subsequent application steps. As shown in Figure 17.

Figure 17

## 2.10.1 The System Print Service Application of Android Equipment

As the Android system is relatively open, the equipment manufacturers can customize the special interface and function according to their need. The parameter setting way may be different because of the different interfaces.

#### 1. Install the print service

Install AdrPrintSvc.apk, the "JM Print Service" will be added in the Android system.

## 2. Connect Wi-Fi printer

- 2.1 Enter into the "Settings" of system, as shown in Figure 18.
- 2.2 Find out the "WIRELESS & NETWORKS" in "Settings" interface, then click "Wi-Fi", as shown in Figure 19.

Figure 18

2.3 Select the "Wi-Fi" function to "ON", and select the "Wireless Printer" hotspot, as shown in Figure 20.

3. Turn on the print service

Figure 20

- 3.1 Enter into the "Settings" of the system, as shown in Figure 18.
- 3.2 Find out "Printing" in "Settings" interface and enter into, as shown in Figure 21.
- 3.3 Find out "JM Print Service" in "Printing" interface and enter into, as shown in Figure 22.

Figure 21

3.4 Switch the "JM Print Service" function from "OFF" to "ON", as shown in Figure 23.

Note: If there is no function switch in the upper right of "JM Print Service" interface, it means the current system has no complete Android Print function; it does not support the system print service.

3.5 After turning on the "JM Print Service", it will search automatically and show the printer if found, as shown in Figure 24.

#### 4. Run APP

APP has to support the system's print service, WPS Office is taken as an example to describe.

- 4.1 Run the APP "WPS Office", as shown in Figure 25.
- 4.2 Open the document which is to be printed in the software, then click the "Tools" button, as shown in Figure 26.

Figure 25

### 2.10.2 AirPrint Printing Application of iPhone iOS Equipment

iPhone iOS equipment used in this example is iPad Air2, iOS system version is 9.1. The application situation of other iOS equipment or system version may be different to this example.

#### 1. Connect Wi-Fi printer

- 1.1 Enter into the "Settings" of the system, as shown in Figure 33.
- 1.2 Find out "WLAN" in "Settings" interface and enter into, as shown in Figure 34.

Figure 33

Figure 34

- 1.3 Turn on the "WLAN" function, equipment will search automatically and show the current hotspot, as shown in Figure 35.
- 1.4 Select the "Wireless Printer" hotspot, as shown in Figure 36.

Figure 36

#### 2. Run APP

As the interface designs of APP are different, the operating way of printing function will also be different. "Word" is taken as an example to describe.

- 2.1 Install and run "Word", as shown in Figure 37.
- 2.2 Open the document which is to be printed, as shown in Figure 38.

Figure 37

Figure 38

2.3 Click the menu icon on the upper left of the "Word" software interface, as shown in Figure 39.2.4 When the menu pops up, click "Print", as shown in Figure 40.

2.5 When the "Printer Options" interface pops up, click "Select Printer", as shown in Figure 41.2.6 Select "Wireless Printer" in the list, as shown in Figure 42.

Figure 41

2.7 Return to "Printer Options" interface and click "Print", the system sends print data to the printer, as shown in Figure 43.

Figure 43

# 2.11 Installing Printer Network Driver

The ways of installing network driver are classified into Newly-install way and Upgrade-install way according to whether the PC is installed the printer driver or not.

If the printer driver hasn't been installed on the PC, adopt newly-install way whose steps are shown in "Newly-install printer network driver".

If the printer driver has been installed on the PC, adopt Upgrade-install way whose steps are shown in "Upgrade-install printer network driver" (Setting driver's network port).

#### 1. Newly-install printer network driver

- 1) Click "Start"  $\rightarrow$  "Settings"  $\rightarrow$  "Select Printers".
- 2) Click "Add printer", then a window of "Add Printer Wizard" pops up, click "Next".
- 3) A window of "Add Printer Wizard" pops up, select "Local printer" in the "Local or Network Printer" window, and then click "Next".
- 4) A window of "Select the Printer port" pops up, select "Create a new port", and then select "Standard TCP/IP Port" in the port and click "Next".

- 9) Return to "Additional Port Information Required", click "Next".
- 10) A window of "Completing the Add Standard TCP/IP Printer Port Wizard" pops up, click "Finish".
- 11) In the window of "Install Printer Software", click "Have Disk".
- 12) A window of "Install From Disk" pops up. Please according to the operating system environment, such as Windows 2000/XP/Vista/Win7 operating system you should select the path as follows: CD-ROM → "Drivers" → "WIN2000 (XP-Vista-Win7)", click "Open", then click "OK" to return to the window of "Install Printer Software", click "Next".
- 13) Follow the guide and click "Next" gradually till the installation is finished. At this time, printer network driver is installed completely.

#### 2. Upgrade-install printer network driver (setting driver's network port)

If PC has installed the printer's driver, set driver's network port to carry out network printing. The concrete steps are shown below:

- 1) Click "Start"  $\rightarrow$  "Settings"  $\rightarrow$  "Select Printers".
- 2) Right click CODESOFT PL-330 driver, click "Properties" on the window popping up.
- 3) A window of "Properties" pops up; click "Ports" and "Add Port".

# **Chapter 3 Control Panel**

# 3.1 Control Panel

There are three LEDs and one button on the control panel. (As Figure 3-1 shown)

Figure 3-1 Control Panel

### 3.1.1 LED

LED	Description
POWER (Green)	Denotes whether the printer's power supply is connected or not. The LED is on when the power is connected.
ERROR (Red)	Denotes printer's status. The LED is on when the malfunction appears.
PAPER OUT (Red)	Denotes printer's paper status. The LED is on when paper out occurs.

Note: Refer to "Error message on the control panel" for detailed information about LED malfunctions in this user's manual.

### 3.1.2 Function Button

Button	Description		
[FEED]	<b>[FEED]</b> controls paper feeding, you can enable or disable the function with a command. When enabled, the paper will be fed continuously if you hold on pressing it, or stop if you loosen it.		

## 3.2 Self Test

Self-test printing is to check if the printer is working properly. If the printer printouts the self-test content normally, it denotes that there is nothing wrong with the printer except for the interface which connects to the computer. Otherwise, the printer should be repaired.

The printer will print out self-test information such as the software version and interface etc.

Hold on pressing the **FEED** button and turn on the printer while the printer cover is closed, the ERROR LED blinks once with one beep (if beeper is installed in the printer). Loosen the button, then the printer prints out the self-test information.

# 3.3 Hex Dump Printing

This function is to check whether the connection between the printer and the computer or the terminal device works properly or not. The method is that hold on pressing the **FEED** button and turn on the printer, the ERROR LED blinks twice with two beeps, then loosen the button. Turn off the printer and restart it to exit this print mode.

# 3.4 Restoring Factory Default Setting

The function is to clear the settings stored in the printer and to restore the factory default settings for correlative parameters.

The method is that hold on pressing the **FEED** button and turn on the printer, the ERROR LED blinks five times with five beeps, then loosen the button, at this time, the function takes effect and turn off the

printer.

# 3.5 Online-aptitude Parameter Settings

## 3.5.1 Set the Printer Parameter by the Matching Driver

CODESOFT PL-330 supports the function of parameter settings, which can be set in the PC with the driver installed in.

The concrete setting steps are shown as follows:

- 1. Make sure that the computer and the printer are connected with the USB cable and both the computer and the printer are turned on, the printer should be in normal working condition as well.
- 2. Under the operating system of WIN 2000/WIN XP/VISTA/WIN 7, click "Start"  $\rightarrow$  "Settings"  $\rightarrow$  "Printers", and open the window of "Printers".

Under the operating system of Windows 8, click "Desktop" in the main panel firstly, and then double click "Control panel" after entering the window of "Desktop", click "Hardware and Sound" to find "Devices and printers", at last, open the window of "Devices and printers".

- 3. Right click "CODESOFT PL-330" in the window of "Printers", and then select "Properties".
- 4. Click "Printer settings" in the "Properties" page and open the window of "Printer settings".

👹 CODESOFT	PL-330 Properties		? 🛛
General Shar	ing Ports Advanced	Device Settings	🗘 Printer settings
EMULATION 10100101 00111010 01011001	Emulation Current :Native	A	Printing Method Current :prefer speed
ERROR C)))	Beep During Error Current :OFF	Check 自检	Self Test Char Set Current :ON
P	PartialCut Set Current :-4	RATE	Baud Rate Current :9600 BPS
	Data Bits Current :8 BITS	PARITY	Parity Current :NONE
STOP	Stop Bits Current :1 BIT	FLOW	Protocol Current :DTR
		ОК (	Cancel Apply

5. In the window of "Parameter settings", each item on the left of the menu setup item is the parameter icon. The items on the upper right are the parameters and the items on the bottom right are the current settings. The computer will load the printer's current setting automatically when you open the parameter setting window. The current setting will be blank if the printer is offline or the printer port is set incorrectly. Then you need to set the printer to online mode or set the printer port

#### correctly.

6. To set parameter, first click the parameter icon, then open the parameter setting window. There are Parameter options, Explanation and Control buttons in the window. Select the corresponding parameter and click "Set"; the printer will change the setting at the time it receives the command. Click "Cancel" to return to the upper window and click "Default" to display the default settings of this menu items.

Stop Bits
The Parameter of picking : <ul> <li>1 BIT</li> <li>2 BITS</li> </ul>
Explanation : Set the printer serial data transmission stop bits.
Set Cancel Default

7. If you want to set several parameters, please refer to the previous point and set the parameter one by one.

- 8. When the setting is finished, click "Set" to exit the window of "Properties".
- 9. Restart the printer and the new settings take effect.

### 3.5.2 Set the Printer Parameter by the Browser Webpage

This printer supports the function of checking the printer state and setting parameters in the host through Ethernet.

PL-330 is taken as an example in the following.

The concrete setting steps are shown as follows:

- 1. Make sure that the computer (or LAN) and the printer are connected with the Ethernet cable and both the computer and the printer are turned on, the printer should be in normal working condition as well.
- 2. Under the operating system of WIN 2000/WIN XP/VISTA/WIN 7, open the browser, input the printer's IP address in the address column and enter into the interface as shown below. If you can not open the webpage, please check whether the IP address is correct and whether the current network is normal.

<ul> <li><u>System Information</u></li> <li><u>Printer Status</u></li> <li><u>Menu Setting</u></li> </ul>	System Information			
	Product	PL-330		
	DHCP	ON -		
	IP Address	10.0.1		
	Subnet Mask	255 . 255 . 255 . 0		
	Gateway	255 . 255 . 255 . 255		
	MAC Address	20 - 2C - B7 - FF - FF - FF		
		submit		
	Note:If you change the after 5 second so that t	he setting of DHCP and click the "submit",please restart the printer he printer can update the infomation !		

3. Click the different option of the left -side column to enter into the corresponding webpage, the webpage will show the relevant information and state of the printer, if the printer state has changed, please refresh the webpage to get the latest printer information.

<ul> <li><u>System Information</u></li> <li><u>Printer Status</u></li> <li><u>Menu Setting</u></li> </ul>	Printer Status Command Mode Printing Method Cutter Error Cover Open Baper End	NATIVE PREFER SPEED NO NO
	Paper End	NO

<u>Menu Setting</u>	<ol> <li>1 EMULATION</li> <li>2 PRINTING METHOD</li> <li>3 BEEP DURING ERROR</li> <li>4 SELF TEST CHAR SET</li> <li>5 PARTIAL CUT SET</li> <li>6 BAUD RATE</li> <li>7 DATA BITS</li> <li>8 PARITY</li> <li>9 STOP BITS</li> <li>10 PROTOCOL</li> <li>11 FULL CUT SET</li> <li>12 SOUNDLIGHT SWITCH</li> </ol> Submit	NATIVE PREFER SPEED OFF ON 0 9600 BPS 8 BITS NONE 1 BIT DTR 0 ON	

4. When setting the parameter, after setting the parameter in the corresponding webpage, click "submit" button, after the webpage reloading, the new settings take effect.

Note: In the "System Information" interface, if you change the setting of DHCP and click the "submit", please restart the printer after 5 seconds so that the printer can update the information!

# **Chapter 4 Installing Paper**

The printer can use the paper with the width of  $79.5\pm0.5$ mm and  $57.5\pm0.5$ mm conveniently. How to install the paper will be explained in details in this chapter.

# 4.1 Thermal Paper Installing Steps

Caution: 1. Don't touch the thermal print head after printing to avoid getting hurt.2. Don't pull the paper out directly with your hand.

1. Press the cover-open button to open the upper cover. If you want to use 57.5mm paper to print, you must install the roll paper guide firstly.

Figure 4-2 Installing the roll paper guide (Optional)

2. Place the roll paper into the paper holder and pull out a small amount of paper.

Figure 4-3 The direction of installing paper

Note: Paper head should be placed down and pulled towards the paper-input slot, but not the opposite.

3. Put the paper head on the printer as shown below and close the upper cover.

Figure 4-4 Pull out the paper head and close the cover

Note: After installing the paper, if PAPER OUT LED and ERROR LED still light, or the printer makes strange noise when feeding paper, please open the cover and re-close it tightly.

# **Chapter 5 Specification**

# 5.1 General

ltem	Description			
Printing method	Thermal line printing			
Paper feed mode	Unidirectional with friction	on feed		
Paper eject direction	Eject from top			
Dot density	640 dots/line (203×203	DPI)		
Printing width	Max:80 mm, 640 dots			
Print speed	Max: 300 mm/s			
Paper feed speed	Max: 300 mm/s			
Line spacing	3.75 mm			
Print head life	150 Km, 1X10 <sup>8</sup> pulse	Note: The instructions are all under the laboratorial measurements with		
Cutter life	1.5 million cut	specified paper.		
Paper thickness	0.065 ~ 0.12 mm			
	Thermel roll nener med	TF50KS-E (Japan paper co.ltd)		
	Thermal roll paper mod	AF50KS-E (JUJO THERMAL)		
	Width: 79.5 ±0.5 mm; 5	7.5 ± 0.5 mm		
	Weight: 53 ~ 80 g/m <sup>2</sup>			
Paper specification	Maximum diameter: Φ83 mm			
	Paper thickness: 0.065 ~ 0.12 mm			
Note: The inner diameter of paper shaft is Φ12 mm and the outer diameter of paper shaft is Φ18 mm.				
Character set	ASCII: 13 international	character sets		
Interface	This printer can be equ Parallel interface: Centri USB interface: 2.0 Full- USB interface (2.0 Full- USB interface (2.0 Full- USB interface (2.0 Full- interface (10/100Base- USB interface (micro) + Wi-Fi (802.11b/g/n)	ipped with the following interfaces: ronics Speed Speed) + Serial interface (RS-232C, DB9) Speed) + Ethernet interface (10/100Base-T) Speed) + Serial interface(RS-232C, DB9) + Ethernet T) Bluetooth		
	leaving the factory. 2. Please take the specific interface as standard.

Paper type	Thermal roll r	aper		
Certificate	CE			

Note: All the technical instructions in this user's manual are the laboratorial measurements which are achieved under national standard store and work environment (room temperature), the measuring paper accords with the specification in this user's manual.

Note: In order to ensure the printer life, strictly prohibit printing full line and full black exceeding 2 CM.

## 5.2 Interface

The printer is configured with one cash drawer interface and one data interface (you can select Parallel interface, USB interface, USB interface + Serial interface, USB interface + Ethernet interface, USB interface + Bluetooth or Wi-Fi). Connect the computer with the suitable cable.

### 5.2.1 Cash Drawer Interface

The cash drawer interface is RJ-11 interface, shown as below.

Figure 5-1 Cash drawer interface

The pin definition of cash drawer interface is shown as Table A-1:

Pin Number	Signal	Direction
1	Frame GND	
2	Cash Drawer drive signal	OUT
3	Cash Drawer Open/closed signal	IN
4	24V (DC)	OUT
5	Cash Drawer drive signal	OUT
6	Cash Drawer Open/closed signal ground	
Drive current≤	24V/1A	

 Table A-1
 Pin definition of the cash drawer interface

Note: Please use the cash drawer that meets the specification mentioned above. Manufacturer will not honor warranty when using unauthorized cash drawer.

## 5.2.2 Parallel Interface

CODESOFT PL-330 parallel interface is compatible with Centronics protocol, supporting BUSY/ACK handshaking protocol and the interface connector is the 36 PIN Centronics type.

Figure 5-2 Parallel interface

Signal definition of each pin of 36PIN parallel interface is shown as the Table A-2 below:

Pin Number	Signal	Direction	Description
1	/STB	IN	Trigger in low level, load the data in rising edge.

2	DATA1	IN	
3	DATA2	IN	
4	DATA3	IN	These simple respectively represent the nevelled date
5	DATA4	IN	from the first bit to the eighth "1" means high level
6	DATA5	IN	while "0" in logic means low level
7	DATA6	IN	
8	DATA7	IN	
9	DATA8	IN	
10	/ACK	OUT	Acknowledge pulse, Low level means that printer is ready to receive data.
11	BUSY	OUT	High level means printer is too busy to receive data.
12	PE	OUT	High level means that paper is out.
13	SEL	OUT	"High" level is pulled up by resistor.
32	/ERR	OUT	Low level means the printer is in error status.
14, 15, 17, 18, 34, 36	NC		NC
16, 19~30, 33	GND		GND, "0" level in logic

Table A-2 Pin definition of 36PIN parallel interface

# Note: ① "IN" means input to the printer, "OUT" means output from the printer. ② The logical level of signal is TTL level.

Time sequence of parallel interface signal is shown as Figure 5-3.

### 5.2.3 USB Interface

USB interface is the 2.0 Full-Speed version.

Figure 5-4 USB interface

Contact number	Signal name	Color
1	VBUS	Red
2	D-	White
3	D+	Green
4	GND	Black

### 5.2.4 Serial Interface

CODESOFT PL-330 serial interface is compatible with RS-232C protocol, supporting RTS/CTS and XON/XOFF handshaking protocol. Its connector is a DB-9 type connector and pin number of serial interface connector is shown as below.

Figure 5-5 Pin number of serial interface connector

Pin number	Signal	From	Description
2	RXD	Host	Receive data from Host
3	TXD	Printer	Send control code X-ON/X-OFF and data to the Host
8	CTS	Printer	"MARK" state means printer is too busy to receive data; "SPACE" means printer is ready to receive data.
5	GND	_	Signal GND
4	DTR	Printer	Data terminal is ready.

Table A-3: Signal definition of the serial interface pin

Table A-3: Signal definition of the serial interface pin

Note: ① "From" means the source where signal comes out. 2 The logical level of signal is EIA level.

The default settings of baud rate and data configuration in serial connecting way are 9600bps, 8 data bits, parity check disabled and 1 stop bit.

CODESOFT PL-330 serial interface can be connected with the standard RS-232C connector. When connecting with a PC, the connecting picture is shown as Figure 5-6. While connecting with an IBM PC or a compatible PC, you can connect the cable as shown in Figure 5-7.

The connection of the serial interface:

Figure 5-6 The connection figure of host 9 PIN and printer

Figure 5-7 The connection figure of host 25 PIN and printer

## 5.2.5 Ethernet Interface

Ethernet interface of 10/100 Base-T can be connected to 10/100M Ethernet.

Figure 5-8 Ethernet interface

### 5.2.6 Power Supply Inlet

The CODESOFT PL-330 connects with a 24V $\pm$ 10% and 2.5A AC adapter. The power supply inlet is shown as Figure 5-9.

Figure 5-9 Power supply inlet

# **Chapter 6 Printer Maintenance**

# 6.1 Cleaning the Printer

Cleaning periodically and the cleaning tool

Periodical cleaning: every 3 months or every 300 working hours once Cleaning tool: dry cloth (please use soft cloth to clean metal parts)

Cleaning the spare parts

Clean the oily spare parts of the printer with dry cloth.

Cleaning the paper feed path

Wipe off the wasted paper and clean the dirt and dust.

#### Cleaning the photoelectric sensor part

As the paper sensor is a correlation photoelectric sensor. You should clean the parts periodically. Clean the shield of the sensor every three months.

Note: 1. Turn off the printer and pull out the power cord before cleaning.

- 2. Print head and the surrounding part may be high temperature after using. Please avoid cleaning it at the moment.
- 3. Don't use hard cloth or combustible solvent to clean the printer.

## 6.2 Error Message on the Control Panel

When the malfunction occurs, the printer will be off-line and give an alarm through LEDs as shown below:

ERROR LED	PAPER OUT LED	Reason	Solution
Blink fast	Off	Auto cutter error	Restart the printer and the auto-cutter will return to the home position automatically. If the problem is still unsolved, please contact the Customer Service Center for maintenance.
On	Off	Cover is open	Close the cover and press it tightly.
On	On	Paper out	Reinstall the paper.
Blink slowly	Off	Print head overheated	Resume working after it cools.

# 6.3 Contact the Technical Service Center

If malfunction occurs and you cannot solve the problem through the operation shown in 6.2, the components of the printer are damaged during using or you need to buy some consumables, please contact the authorized technical service centre.

# **Chapter 7 Control Commands**

# 7.1 General

CODESOFT PL-330 supplies ESC/POS printing commands and is compatible with STAR Line Mode printing commands.

The format is described as follows:

Commar	d	Function
Format:	ASCII: Indicates the ASCII equivalents	
	Decimal: Indicates the decimal equivalents	
	Hex: Written in hexadecimal code	
Decembrati	The function and using instruction of thet compared	

Description: The function and using instruction of that command Example: Some examples will be listed for easier understanding

# 7.2 Explanation of terms

## 7.2.1 ESC/POS Printing Commands

BEL			Beep once
Format:	ASCII:	BEL	
	Decimal:	7	
	Hex:	07	
Description	n:		
Beep once	e in the unit of	50 millise	econds
НТ			Horizontal tab
Format:	ASCII:	HT	
	Decimal:	9	
	Hex:	09	
Description	n:		
Move the	print position t	o the nex	t horizontal tab position
LF			Print and line feed
Format:	ASCII:	LF	
	Decimal:	10	
	Hex:	OA	
Description	n:		
Print the d without pri	ata in the inpu nting.	it buffer a	nd feed one line. If the line input buffer is empty, then it only feeds one line
FF			Print and Feed to the next black mark position
Format:	ASCII:	FF	
	Decimal:	12	
	Hex:	OC	

### Description:

Print the data in the print buffer and feeds paper to the next black mark position when black mark takes effect.

DLE EOT n					Status transmission
Format:	ASCII:	DLE	EOT	n	
	Decimal:	16	4	n	
	Hex:	10	04	n	
Deceriation					

#### Description:

Transmit the selected printer status in serial interface, 1≤n≤4; this command is still valid even in error or off-line status.

n=1: Transmit print status

n=2: Transmit off-line status

n=3: Transmit error status

n=4: Transmit paper sensor status

ESC BEL	n1 n2						Beep for appointment
Format:	ASCII:	ESC	BEL	n1	n2	n3	
	Decimal:	27	7	n1	n2	n3	
	Hex:	1B	07	n1	n2	n3	

#### Description:

N1 specifies the length of beeping time, n2 specifies the length of intermission time and n3 is the beeping times. The unit of n1 and n2 is 100 milliseconds.

ESC SP					Set right-side character spacing
Format:	ASCII:	ESC	SP	n	
	Decimal:	27	32	n	
	Hex:	1B	20	n	

#### Description:

Set the right-side spacing of the character to n\*(horizontal or vertical minimal unit) n=0~255. Horizontal or vertical minimal unit is specified by GS P command.

ESC !					Set character print mode
Format:	ASCII:	ESC	!	n	
	Decimal:	27	33	n	
	Hex:	1B	21	n	

#### Description:

"ESC ! n" is the integrated setting command for character printing mode, n=0~255. The significations of n are shown below.

Bit	Value	Function
0	0	Character A
0	1	Character B
1, 2		Not defined
2	0	Emphasize mode not selected
3	1	Emphasize mode selected
4	0	Double-height not selected
4	1	Double-height selected
E	0	Double-width not selected
5	1	Double-width selected
6		Not defined
7	0	Underline mode not selected
1	1	Underline mode selected

ESC \$						Set absolute print position
Format:	ASCII:	ESC	\$	nL	nH	
	Decimal:	27	36	nL	nH	
	Hex:	1B	24	nL	nH	

#### Description:

Set the distance from the beginning of the line to the print position. The distance is (nL+nH\*256)\* (horizontal or vertical minimal unit). nL, nH=0~255.

Horizontal or vertical minimal unit are specified by GS P command.

ESC %					Select/cancel user-defined characters set
Format:	ASCII:	ESC	%	n	
	Decimal:	27	37	n	
	Hex:	1B	25	n	

### Description:

n=1, Select the user-defined characters set; n=0, Select inner characters set.

Default: n=0

ESC &								Define user-defined characters
Format:	ASCII:	ESC	&	у	c1	c2	[x1 d1d(y*x1)]	[xk d1d(y*xk)]
	Decimal:	27	38	у	c1	c2	[x1 d1d(y*x1)]	[xk d1d(y*xk)]
	Hex:	1B	26	у	c1	c2	[x1 d1d(y*x1)]	[xk d1d(y*xk)]

### Description:

Define the user-defined characters from c1 to c2.

y=3; 32≤c1≤c2≤126;

0≤x≤12; [Character A 12\*24], 0≤x≤9; [Character B 8\*16];

d=0~255; k=c2-c1+1;

y specifies the number of bytes in the vertical direction, x specifies the number of dots in the horizontal direction, d specifies the user-defined character.

ESC *								Select bit-image mode
Format:	ASCII:	ESC	*	m	n1	n2	d1dk	
	Decimal:	27	42	m	n1	n2	d1dk	
	Hex:	1B	2A	m	n1	n2	d1dk	

Description:

Select the image mode with m; n1 and n2 specify the number of dots. The image data d1...dk

m=0, 1, 32, 33; n1=0~255; n2=0~3; d=0~255.

k=n1+256×n2 (m=0, 1)

k= (n1+256×n2) × 3 (m=32, 33)

The number of dots in horizontal direction is n1+256×n2.

If the number of dots exceeds one line, the part which exceeds the maximum number of dots (shown as below) is ignored.

M is used to select the dot image way.

		Ver	tical	Horizontal		
М	Mode	Number of dots	Dot density	Dot density	Number of dots (Max)	
0	8-dot single-density	8	68 DPI	101 DPI	288	

### CODESOFT PL-330 User's Manual

Description:

n1 specifies the beeping times, n2 specifies the length of beeping time and n3 specifies the length of intermission time. The unit of n1, n2 is 0.1 second.

GS !					Select Character size
Format:	ASCII:	GS	!	n	
	Decimal:	29	33	n	
	Hex:	1D	21	n	

Description:

n=0~7, 16~23, 32~39, 48~55, 64~71, 80~87, 96~103,112~119;

The high four bits of n represent the enlarged multiple of the character width and the low four bits represent the enlarged multiple of the character height.

GS *							Define downloaded bit image
Format:	ASCII:	GS	*	n1	n2	d1dk	
	Decimal:	29	42	n1	n2	d1dk	
	Hex:	1D	2A	n1	n2	d1dk	

Description:

Define the downloaded bit image in the downloaded graphic area.

n1=1~48. n2=1~255. n1×n2<1200, k=n1×n2×8.

d specifies the bit image data. n1×8 dots in the horizontal direction and n2×8 dots in the vertical direction. The downloaded bit image is valid till it is redefined or printer is restarted.

The format of bit image is shown below.

GS / Format: Print downloaded bit image

D 1.11	
1 Decription	

ASCII:

Hex:

Decimal:

Print the downloaded bit image. n=0, 1, 2, 3, 48, 49, 50, 51.

GS

29

1D

/

47

2F

n is used to select the bit image. The bit image can be defined by GS \* command:

n

n

n

N	Mode	Density in vertical	Density in horizontal
0, 48	Normal	203 DPI	203 DPI
1, 49	Double-width	203 DPI	101 DPI
2, 50	Double-height	101 DPI	203 DPI
3, 51	Double-width and double-height	101 DPI	101 DPI

#### CODESOFT PL-330 User's Manual

GS B						Turn white/black reverse mode on/off
Format:	ASCII:	GS	В	ĺ	า	
	Decimal:	29	66	I	۱	
	Hex:	1D	42	r	I	
Descripti	ion:					
When th	e last bit of n	is 0, turn	the whi	ite/blac	k reve	rse mode off.
When th	e last bit of n	is 1, turn	the whi	ite/blac	k reve	rse mode on.
						Eachle/dischle the printer to print LIDI character
GS П Format:	ASCII	69	н		<u>n</u>	
r onnat.	Decimal:	29	72	>	n	
	Hex:	1D	48	- 3	n	
Descripti	ion:

GS L						Set left margin
Format:	ASCII:	GS	L	nL	nŀ	
	Decimal:	29	76	nL	nŀ	
	Hex:	1D	4C	nL	nł	
Descripti	ion:					
Set the c nL, nH=0	distance betw 0∼255.	veen print	positio	n and l	eft ma	rgin is (nL+nH*256)*(horizontal or vertical minimal unit)
Horizont	al or vertical	minimal u	init is sp	ecified	by G	S P command.
						Set berizentel er vertigel minimel unit
GS P Format:	ASCII	65	D	v \	,	Set nonzontal of vertical minimal unit
r onnat.	Decimal:	29	1 80	n y x v	, ,	
	Hex:	1D	50	x v	,	
Descripti	ion:			<u> </u>		
Set the h	orizontal and	t vertical	minimal	unit to	1/v in	ch and 1/v inch
When v	or $v=0$ the de	a vertieai afault sati	ting 1/20	13 inch		
WHCH X	or y=0, the ut		ing 1/20		0 13 0	
GS V						Select cut mode and cut paper
Format:	ASCII:	GS	V	m	(n)	
	Decimal:	29	86	m	(n)	
	Hex:	1D	56	m	(n)	
Descripti	ion:					
(The con	nmand can o	nly realiz	e full cu	t or pai	tial cu	t according to the cutter type.)
m=0, 48	; No n param	eter, Exe	cutes a	full cut		
m=1, 49	; No n param	eter, Exe	cutes a	partial	cut (w	th one point left in the middle).
m=6, n=0	0~255; Feed	paper to	n*(verti	cal min	imal u	nit) and executes a full cut.
m=66, n:	=0~255; Fee	d paper to	o n*(ver	tical mi	nimal	unit) and executes a partial cut.
GS W						Set print area width
Format:	ASCII:	GS	W	nL	nH	
	Decimal:	29	87	nL	nH	
	Hex:	1D	57	nL	nH	
Descripti	ion <sup>.</sup>					

Description:

Set the print area width to  $(nL+nH^{*}256)^{*}$  (horizontal or vertical minimal unit),
nL, nH=0~255. Horizontal or vertical minimal	unit is specified by GS P.
--	----------------------------

GS f							S	Select the HRI character font

GS v0										Print raster bit image
Format:	ASCII:	GS	V	0	m	хL	хH	уL	yН	d1dk
	Decimal:	29	118	48	m	хL	хH	уL	yН	d1dk
	Hex:	1D	76	30	m	хL	хH	уL	уH	d1dk

### Description:

Print a raster bit image according to the numerical value of m.

m=0, 48: normal printing; m=1, 49: double width printing; m=2, 50: double height printing; m=3, 51: quadruple-size printing.

XL, xH, yL, yH=0~255.

The number of bytes in horizontal printing: xL+xH\*256;

The number of dots in vertical printing: yL+yH\*256.

k= (xL+xH\*256)\*(yL+yH\*256)

GS w					Set the transverse size of barcode
Format:	ASCII:	GS	W	n	
	Decimal:	29	119	n	
	Hex:	1D	77	n	

Description:

Set the transverse size of barcode.

2≤n≤6.

## 7.2.2 STAR Line Mode Printing Commands

ESC RS F n	1					Select font
Format:	ASCII:	ESC	RS	F	n	
	Decimal:	27	30	70	n	
	Hex:	1B	1E	46	n	
Description:						
0≤n≤1						
Selects a for	nt					
			n 0 1		Font Font-A (12x24 dots) Font-B (9x24 dots)	
ESC GS t n						Select code page
Format:	ASCII:	ESC	GS	t	n	· · ·
	Decimal:	27	29	116	n	
	Hex:	1B	1D	74	n	
Description:						
0≤n≤21						
32≤n≤34						
64≤n≤79						

## Specifies code page

ESC R n					Specify international character set
Format:	ASCII:	ESC	R	n	
	Decimal:	27	82	n	
	Hex:	1B	52	n	

Description:

0≤n≤14

n=64

48≤n≤57 ("0"≤n≤"9")

65≤n≤69 ("A"≤n≤"E")

Specifies international characters

n	International Characters
0, 48	USA
1, 49	France
2, 50	Germany
3, 51	UK
4, 52	Denmark
5, 53	Sweden
6, 54	Italy
7, 55	Spain
8, 56	Japan
9, 57	Norway
10, 65	Denmark II
11, 66	Spain II
12, 67	Latin America
13, 68	Korea
14, 69	Ireland

			0000	_00		
			64		Legal	]
ESC / n						Specify/cancel slash zero
Format:	ASCII:	ESC	/	n		
	Decimal:	27	47	n		
	Hex:	1B	2F	n		
Descriptior	ו:					
n=0, 1, 48,	49					
Specifies a	and cancels sla	sh zeros	i.			
			n		Function	
			0, 48		Cancels slash zero	
			1, 49		Specifies slash zero	
ESC SP n						Set ANK right space
Format:	ASCII:	ESC	SP n	<u>ו</u>		
	Decimal:	27	47 n			
	Hex:	1B	20 n	ı		
Descriptior	ו:					
0≤n≤15						
48≤n≤57 ("	'0"≤n≤"9")					
65≤n≤70 ("	'A"≤n≤"F")					
Specifv the	e right space ar	nount of	ANK ch	ara	cters in n dots.	
The ANK o	haracter width	is "left s	bace an	າດມ	nt" + "ANK font dot count" + "righ	nt space amount"
			puee un	loai		
ESC M						Specify 12 dot pitch
Format:	ASCII:	ESC	М			
	Decimal:	27	77			
	Hex:	1B	4D			
Descriptior	ו:					
Specify the	e right space ar	mount of	ANK ch	nara	cters in 0 dots.	
ESC P						Specify 15 dot pitch
Format:	ASCII:	ESC	Р			
	Decimal:	27	80			
	Hex:	1B	50			
Descriptior	ו:					
Specify the	e right space ar	mount of	ANK ch	ara	cters in 3 dots.	
ESC :						Specify 16 dot pitch
Format:	ASCII:	ESC	:			
	Decimal:	27	58			
	Hex:	1B	3A			
Descriptior	ו:					
Specify the	e right space ar	mount of	ANK ch	nara	cters in 4 dots.	
ESC a						Specify 14 dot nitch
Format:	ASCII:	ESC	g			
	Decimal:	27	103			
	Hex:	1B	67			
Description	ו.					

### Specify the right space amount of ANK characters in 2 dots.

Format:	ASCII:	ESC	i	n1	n2
	Decimal:	27	105	n1	n2
	Hex:	1B	69	n1	n2

Description:

0≤n1≤5

48≤n1≤53 ("0"≤n1≤"5")

0≤n2≤5

48≤n2≤53 ("0"≤n2≤"5")

Specifies/cancels double high/wide for characters.

This command is ignored if either n1 or n2 is outside of the defined area.

n1	Expanded high
0, 48	Cancels expanded high
1, 49	Specifies 2x high expansion
2, 50	Specifies 3x high expansion
3, 51	Specifies 4x high expansion
4, 52	Specifies 5x high expansion
5, 53	Specifies 6x high expansion

n2	Expanded wide
0, 48	Cancels expanded wide
1, 49	Specifies 2x wide expansion
2, 50	Specifies 3x wide expansion
3, 51	Specifies 4x wide expansion
4, 52	Specifies 5x wide expansion
5, 53	Specifies 6x wide expansion

ESC W n

Specify/cancel expanded wide

Format:	ASCII:	ESC	W	n
	Decimal:	27	87	n
	Hex:	1B	57	n

Description:

0≤n≤5

48≤n≤53 ("0"≤n≤"5")

Specifies/cancels double wide for characters.

n2	Expanded wide
0, 48	Cancels expanded wide
1, 49	Specifies 2x wide expansion
2, 50	Specifies 3x wide expansion
3, 51	Specifies 4x wide expansion
4, 52	Specifies 5x wide expansion
5, 53	Specifies 6x wide expansion

### ESC h n

Format:	ASCII:	ESC	h	n	
	Decimal:	27	104	n	
	Hex:	1B	68	n	

### Description:

0≤n≤5

48≤n≤53 ("0"≤n≤"5")

Specifies/cancels double high for characters.

n1	Expanded high
0, 48	Cancels expanded high
1, 49	Specifies 2x high expansion

Specify/cancel expanded high

Set/cancel the double wide/high

2, 50	Specifies 3x high expansion
3, 51	Specifies 4x high expansion
4, 52	Specifies 5x high expansion
5, 53	Specifies 6x high expansion

SO				Set double wide
Format:	ASCII:	SO		
	Decimal:	14		
	Hex:	0E		
Descriptio	n:			
Specifies of	double wide for	characte	ers.	
DC4				Cancel expanded wide
Format:	ASCII:	DC4		
	Decimal:	20		
	Hex:	14		
Descriptio	n:			
Cancels e	xpanded wide.			
ESC SO				Set double high
Format:	ASCII:	ESC	SO	
	Decimal:	27	14	
	Hex:	1B	0E	
Description	n:			
Specifies of	double high for	ANK cha	racters	ind Chinese characters.
ESC DC4				Cancel expanded high
Format:	ASCII:	ESC	DC4	
	Decimal:	27	20	
	Hex:	1B	14	
Descriptio	n:			
Cancels ex	xpanded high.			
ESC E				Select emphasized printing
Format:	ASCII:	ESC	Е	
	Decimal:	27	69	
	Hex:	1B	45	
Descriptio	n:			
Specifies e	emphasized pri	nting for	ANK cha	racters.
ESC F				Cancel emphasized printing
Format:	ASCII:	ESC	F	
	Decimal:	27	70	
	Hex:	1B	46	

Description:

Cancels emphasized printing.

			001			
ESC – n						Select/cancels underling mode
Format:	ASCII:	ESC	-	n		
	Decimal:	27	45	n		
	Hex:	1B	2D	n		
Description	ו:					
n=0, 1, 48,	49					
Specifies u	underlinina (2 d	lots).				
-	500

## 1≤n4≤255

n3 (bar code mode), n4 bar code height (dot count), d (bar code data), k (bar code data count) definitions differ according to the type of bar code.

Bar code printing is executed according to the following parameters.

n1	Bar code type
0, 48	UPC-E
1, 49	UPC-A
2, 50	JAN/EAN8
3, 51	JAN/EAN13
4, 52	Code39
5, 53	ITF
6, 54	Code128

n2	Under-bar character selection and added line feed selection				
1, 49	No added under-bar characters Executes line feed after printing a bar code				
2, 50	Adds under-bar characters Executes line feed after printing a bar code				
3, 51	No added under-bar characters Does not execute line feed after printing a bar code				
4, 52	Adds under-bar characters Does not execute line feed after printing a bar code				

Auto-cutter

### ESC d n

-ormat:	ASCII:	ESC	d	n	
	Decimal:	27	100	n	
	Hex:	1B	64	n	

Description:

0≤d≤3

48≤d≤51 ("0"≤d≤"3")

Executes the auto-cutter.

n	Auto cutter
	Full cut at the current position.
0, 48	Print data in line buffer is printed before a full cut.
	This command is ignored if the printer is not equipped with an auto-cutter.
	Partial cut at the current position.
1, 49	Print data in line buffer is printed before a partial cut.
	This command is ignored if the printer is not equipped with an auto-cutter.
	Paper is fed to cutting position, then a full cut.
2, 50	Print data in line buffer is printed before the operation described above.
	This command is ignored if the printer is not equipped with an auto-cutter.

	Paper is fed to cutting position, then a partial cut.
3, 51	Print data in line buffer is printed before the operation described above.
	This command is ignored if the printer is not equipped with an auto-cutter.

1≤n1≤12 <sup>°</sup>	7					
1≤n2≤12 <sup>·</sup>	7					
Sets the	eneraizina	and de	elav tim	nes fo	or drive	e of the external device.
* Eneraiz	ing time =	10 x n1	l (ms)			
* Delav ti	me = 10 x	n2 (ms	)			
Doidy a		(e	)			
BEL						External device 1 drive instruction
Format:	ASCII:	BEL				
	Decimal:	7				
	Hex:	07				
Descripti	on:					
Executes	the extern	al devi	ce driv	e		
F0						Esternal device 4 drive instruction
FS Formati		<b>F</b> 0				External device 1 drive instruction
Format.	ASCII.	70 20				
	Decimai. Hov	20 10				
Decembrati		10				
Description	on:					
Executes pulse wic	the extern th (ESC Bl	al devi EL n1 r	ce ariv 12).	e cor	naition	is set according to the command to set the external drive device
SUB						External device 2 drive instruction
Format:	ASCII:	SUB				
	Decimal:	26				
	Hex:	1A				
Descripti	on:					
Drives ex	ternal devi	ce 2.				
The ener	gizing time	and de	elay tin	ne fo	r the e	external device 2 are fixed at 200 ms each.
EM						External device 2 drive instruction
Format:	ASCII:	EM				
	Decimal:	25				
	Hex:	19				
Descripti	on:					

Drives external device 2.

The energizing time and delay time for the external device 2 are fixed at 200 ms each.

Format: ASCII: ESC GS BEL m t1 t2 Decimal: 27 29 7 m t1 t2 Hex: 1B 1D 07 m t1 t2	ESC GS BEL m t1 t2								Ring buzzer
Decimal: 27 29 7 m t1 t2 Hex: 1B 1D 07 m t1 t2	Format:	ASCII:	ESC	GS	BEL	m	t1	t2	
Hex <sup>.</sup> 1B 1D 07 m t1 t2		Decimal:	27	29	7	m	t1	t2	
		Hex:	1B	1D	07	m	t1	t2	

Description:

1≤m≤2, 49≤m≤50 ("1"≤m≤"2")

1≤t1≤255

1≤t2≤255

Rings the buzzer.

m specifies the drive terminal of the buzzer.

m	Buzzer Drive Terminal
1, 49	Buzzer Drive Terminal 1
2, 50	Buzzer Drive Terminal 2

• Energizing time = 20 msec x t1

• Delay time = 20 msec x t2

ESC GS EM DC1 m n1 n2

External buzzer drive pulse condition settings

Format:	ASCII:	ESC	GS	ΕM	DC1 m n1 n2
	Decimal:	27	29	25	17 m n1 n2
	Hex:	1B	1D	19	11 m n1 n2

Description:

1≤m≤2 49≤m≤50

0≤n1≤255

0≤n2≤255

Sets external buzzer derive pulse condition.

m	Buzzer Drive Terminal
1, 49	Buzzer Drive Terminal 1
2, 50	Buzzer Drive Terminal 2

\* Energizing time = 20 msec x n1

\* Delay time = 20 msec x n2

ESC GS EM DC2 m n1 n2						External buzzer drive execution
Format:	ASCII:	ESC	GS	EM	DC2 m n1 n2	
	Decimal:	27	29	25	18 m n1 n2	
	Hex:	1B	1D	19	12 m n1 n2	

Description:

1≤m≤2 49≤m≤50

1≤n1≤20

n2=0

Repeatedly drives the buzzer according to the ON/OFF conditions set by the external buzzer drive pulse conditions command <ESC> <GS> <EM> <DC1> m t1 t2.

m	Buzzer Drive Terminal
1, 49	Buzzer Drive Terminal 1
2, 50	Buzzer Drive Terminal 2

ESC RS	d n					Set print density
Format:	ASCII:	ESC	RS	d	n	
	Decimal:	27	30	100	n	
	Hex:	1B	1E	64	n	

## Description:

0≤n≤6

48≤n≤57 ("0"≤n≤"6")

Sets print density.

n	Print density
0, 48	Print density 1.3
1, 49	Print density 1.2
2, 50	Print density 1.1
3, 51	Print density 1.0
4, 52	Print density 0.9
5, 53	Print density 0.8
6, 54	Print density 0.7

### ESC RS r n

Format:	ASCII:	ESC	RS	r	n	
	Decimal:	27	30	114	n	
	Hex:	1B	1E	72	n	

### Description:

0≤n≤3

48≤n≤51 ("0"≤n≤"3")

Sets print speed.

n	Print speed
0, 48	High speed
1, 49	Mid-speed
2, 50	Slow speed
3, 51	Slower speed

### ESC RS a n

Set status transmission conditions

Set print speed

Format:	ASCII:	ESC	RS	а	n	
	Decimal:	27	30	97	n	
	Hex:	1B	1E	61	n	

Description:

0≤n≤3, 48≤n≤51 ("0"≤n≤"3")

Sets the status transmission conditions.

n	Status transmission conditions
0, 48	ASB invalid
1, 49	ASB valid

ESC AC	K SOH				Real-time printer status (ASB status)
Format:	ASCII:	ESC	ACK	SOH	
	Decimal:	27	6	1	
	Hex:	1B	06	01	
Descripti	on:				
Sends A	SB status in	format	tion to t	he host.	
This com	imand is no	t used	when A	ASB is valid.	
ENQ					Real-time printer status (1)
Format:	ASCII:	ENQ			
	Decimal:	5			
	Hex:	05			

Description:

Sends 1 byte of the following the printer status

This command is not used when ASB is valid.

Dit	Contonto	Status			
DIL	Contents	"0"	"1"		
7	Conversion SW	OPEN	CLOSE		
6	Overrun Error	No	Yes		
5	Reception Buffer Empty	Has Data	Empty		
4	Fixed at "0"	-	-		
3	Paper end	Paper	No Paper		
2	Other Errors	No	Yes		
1	Framing Error	No	Yes		
0	Parity Error	No	Yes		

EOT			Real-time printer status (2)
Format:	ASCII:	EOT	
	Decimal:	4	
	Hex:	04	

## Description:

Sends 1 byte of the following the printer status.

This command is not used when ASB is valid.

Dit	Contonto	Status			
DIL	Contents	"0"	"1"		
7	Compulsion SW	OPEN	CLOSE		
6	Presenter Paper Jam Error	Paper	No Paper		
5	Paper Near-end (Outer Side)	Has Data	Empty		
4	Fixed at "1"	-	-		
3	Paper end	Paper	No Paper		
2	Paper Near-end (Inner Side)	Paper	No Paper		
1	BINDING MEDIA Error	No	Yes		
0	Fixed at "0"	-	-		

ESC ACH	< CAN				Execute real-time printer reset
Format:	ASCII:	ESC	ACK	CAN	
	Decimal:	27	6	24	
	Hex:	1B	06	18	

Description:

Execute real-time printer reset.

ETB						Update ASB ETB status
Format:	ASCII:	ETB				
	Decimal:	23				
	Hex:	17				
Descripti	on:					
Sets the	ASB ETB s	tatus v	when	read	ing tl	his command from the reception buffer, then sends ASB.
ESC RS	En					Initialize ASB ETB counter and ETB status
Format:	ASCII:	ESC	RS	E	n	
	Decimal:	27 4 D	30 4 E	69	n	
	Hex:	IB	IE	45	n	
Description	on:					
n=0	<b>\</b>					
n=48 ("0"					41a a .	
Clears th	e ASB ETE	Coun	ter to	zero	, the	n clears the ETB status.
ESC p						Specify Chinese character mode
Format:	ASCII:	ESC	р 110			
	Decimai:	27 1 R	712			
Descripti	1167.	ID	70			
Specifice	UII. Chinaga a	horoot	or mo	do		
Specifies	Chinese C	lalaci		ue		
ESC q						Cancel Chinese character mode
Format:	ASCII:	ESC	q			
	Decimal:	27	113			
	Hex:	IB	71			
Description	on:			_		
Cancel C	ninese cha	racter	mode	9		
ESC \$ n						Specify/cancel Chinese character mode
Format:	ASCII:	ESC	\$	n		
	Decimal:	27	36	n		
	Hex:	1B	24	n		
Descripti	on:					
Specifies	and cance	ls the	Chine	ese c	hara	cter mode.
		Γ	I	n		Chinese character mode
			0,	48		Cancels Chinese character mode
			1,	49		Specifies Chinese character mode
ESC s n1	n2					Set 2 byte Chinese left/right spaces
Format:	ASCII:	ESC	S	n1	n2	
	Decimal:	27	115	n1	n2	
	Hex:	1B	73	n1	n2	
Descripti	on:					
0≤n1≤7						
48≤n1≤5	5 ("0"≤n1≤"	7")				
0≤n2≤15		<b>0</b> "				
48≤n2≤5	/ ("0″≤n2≤"	9″)				

## 65≤n2≤70 ("A"≤n2≤"F")

Adds n1 dots left space amount and n2 dots right space amount to Chinese characters.

Format: ASCII: ESC t n1 n2 Decimal: 27 116 n1 n2 Hex: 1B 74 n1 n2											
Decimal: 27 116 n1 n2 Hex: 1B 74 n1 n2											
Hex: 1B 74 n1 n2											
Description:											
0≤n1≤7											
48 <n1<55 ("n"<n1<"7")<="" td=""></n1<55>											
≤n2≤15											
65≤n2≤70 ("A"≤n2≤"F")											
Adds n1 dots left space amount and n2 dots right space amount to single-byte Chinese characters.											
ESC r c1 c2 d1dk Register Chinese download characters											
Format: ASCII: ESC r c1 c2 d1 dk											
Decimal: 27 114 c1 c2 d1 dk											
Hex: 1B 72 c1 c2 d1 dk											
 Description:											
0 <d<255< td=""></d<255<>											
U=U=255											
c1=FEn A1nsc2sFEn											
Registers Chinese download characters to c1 and c2 addresses.											
Horizontal 24 Dots											
▲ d1 ● ● ● ● ● ● d2 ● ● ● ● ● ● d3 ● ● ● ● ● ● d3											
d4 • • • • • • • d5 • • • • • • • • • • •

Vertical   0<											
Vertical 0.10											

ESC @				Command initialization
Format:	ASCII:	ESC	@	
	Decimal:	27	64	
	Hex:	1B	40	

## Description:

Initializes each command after printing data in the line buffer.

ESC ? LF	NUL					Reset printer (execute self print)
Format:	ASCII:	ESC	?	LF	NUL	
	Decimal:	27	63	10	0	
	Hex:	1B	3F	0A	00	

## Description:

Resets the printer and executes on self print.

# **Chapter 8 Command List**

# 8.1 ESC/POS Command List

Control command	Description
BEL	Beep once
HT	Horizontal tab
LF	Print and line feed
FF	Print and Feed paper to the next black mark position
DLE EOT	Real-time status transmission
ESC BEL	Beep for appointment
ESC SP	Set right-side character spacing
ESC !	Set print mode
ESC \$	Set absolute print position
ESC %	Select/cancel user-defined character set
ESC &	Define user-defined characters
ESC *	Select bit-image mode
ESC –	Turn underline mode on/off
ESC 2	Select line spacing to 3.75mm
ESC 3	Set line spacing
ESC =	Select peripheral device
ESC ?	Cancel user-defined character
ESC @	Initialize printer
ESC D	Set horizontal tab position
ESC E	Turn emphasized mode on/off
ESC J	Print and feed paper
ESC M	Select character font
ESC R	Select the international character set
ESC V	Turn 90°clockwise rotation mode on/off
ESC \	Set relative print position
ESC a	Select justification
ESC c 3	Select paper sensor
ESC c 4	Select paper sensor to stop printing
ESC c 5	Enable/disable panel button
ESC d	Print and feed n lines
ESC p	Generate pulse
ESC t	Select code page
ESC {	Turn on/off upside-down printing mode
FS !	Select Chinese character mode
FS &	Set Chinese mode
FS -	Turn Chinese character underline on /off

Exit Chinese mode
User-defined Chinese characters
Set Chinese character spacing
Turn quadruple-size mode on/off for Chinese character
Print NV bit image
Define the NV bit image
Beep for appointment
Select Character size
Define downloaded bit image
Print downloaded bit image
Turn white/black reverse mode on/off
Enable/disable the printer to print HRI character
Set left margin
Set horizontal or vertical minimal unit
Select cut mode and cut paper
Set print area width
Select the HRI character font
Set bar code height
Print bar code
Print raster bit image
Set the transverse size of barcode

## 8.2 STAR Line Mode Command List

Control command	Description
ESC RS F (1B 1E 46 n)	Select font
ESC GS t (1B 1D 74 n)	Specify code page
ESC 52 n (1B 52 n)	Specify international character set
ESC / (1B 2F n)	Specify/cancel slash zero
ESC SP (1B 20 n)	Set ANK right space
ESC M (1B 4D)	Specify ANK 12 dot pitch
ESC P (1B 50)	Specify ANK 15 dot pitch
ESC : (1B 3A)	Specify ANK 16 dot pitch
ESC g (1B 67)	Specify ANK 14 dot pitch
ESC I (1B 69 n1 n2)	Set/cancel the double wide/high printing
ESC W (1B 57 n)	Set/cancel the double wide printing
ESC h (1B 68 n)	Set/cancel the double high printing
SO (0E)	Set double wide printing
DC4 (14)	Cancel double wide printing
ESC SO (1B 0E)	Set double high printing
ESC DC4 (1B 14)	Cancel expanded high printing

ESC E (1B 45)	Select emphasized printing
ESC F (1B 46)	Cancel emphasized printing
ESC - (1B 2D n)	Select/cancels underline mode
ESC _ (1B 5F n)	Specify/cancel upperline
ESC 4 (1B 34)	Select white/black inverted printing
ESC 5 (1B 35)	Cancel white/black inversion
SI (0F)	Select upside-down printing
DC2 (12)	Cancel upside-down printing
LF (0A)	Line feed
CR (0D)	Carriage return (line feed)
ESC a (1B 61 n)	Feed paper n lines
ESC z (1B 7A n)	Select line feed amount
ESC 0 (1B 30)	Specify line spacing to 3 mm
ESC J (1B 4A n)	n/4 mm line feed
ESC I (1B 49 n)	n/8mm line feed
ESC GS P	Set page mode
FF (0C)	Form feed
ESC C (1B 43 n)	Set page length to n lines
ESC C 0 (1B 43 00 n)	Set page length to n x 24 mm units
VT (0B)	Feed paper to vertical tab position
ESC B (1B 42 n1 n2 nk 00)	Set/Clear vertical tab position
ESC   (1B 6C n)	Set left margin
ESC Q (1B 51 n)	Set right margin
HT (09)	Move horizontal tab
ESC D (1B 44 n1 n2nk 00)	Set/Clear horizontal tab
ESC GS A (1B 1D 41 n1 n2)	Move absolute position
ESC GS R (1B 1D 52 n1 n2)	Move relative position
ESC GS a (1B 1D 61 n)	Specify position alignment
ESC & (1B 26 c1 c2 n d1 d48)	Register/delete 12 x 24 dot font download characters
ESC % (1B 25 n)	Specifies/cancels ANK download characters
ESC K (1B 4B n1 n2 d1 dk)	Standard density bit image
ESC L (1B 4C n1 n2 d1 dk)	High density bit image
ESC k (1B 6B n1 n2 d1 dk)	Fine density bit image
ESC X (1B 58 n1 n2 d1 dk)	Fine density bit image (Compatible with 24 bit wire dots)
ESC FS q (1B 1C 71 n[x11 x12 y11 y12 d1 dk]1 [xn1 xn2 yn1 yn2 d1 dk]n)	Register logo
ESC FS p (1B 1C 70 n m)	Print logo
ESC RS L (1B 1E 4C m)	Print logo in batch/Batch control of registered logos
ESC b (1B 62 n1 n2 n3 n4 d1dk 1E)	Print bar code
ESC d (1B 64 n)	Paper cutter instruction
ESC BEL (1B 07 n1 n2)	Set external drive device 1 pulse width
BEL (07)	External device 1 drive instruction

FS (1C)	External device 1 drive instruction
SUB (1A)	External device 2 drive instruction
EM (19)	External device 2 drive instruction
ESC GS BEL (1B 1D 07 m t1 t2)	Ring buzzer
ESC GS EM DC1 (1B 1D 19 11 m n1 n2)	External buzzer drive pulse condition settings
ESC GS EM DC2 (1B 1D 19 12 m n1 n2)	External buzzer drive execution
ESC RS d (1B 1E 64 n)	Set print density
ESC RS r (1B 1E 72 n)	Set print speed
ESC RS a (1B 1E 61 n)	Set status transmission conditions
ESC ACK SOH (1B 06 01)	Real-time printer status (ASB status)
ENQ (05)	Real-time printer status (1)
EOT (04)	Real-time printer status (2)
ESC ACK CAN (1B 06 18)	Execute real-time printer reset
ETB (17)	Update ASB ETB status
ESC RS E (1B 1E 45 n)	Initialize ASB ETB counter and ETB status
ESC p (1B 70)	Specify Chinese character mode
ESC q (1B 71)	Cancel Chinese character mode
ESC \$ (1B 24 n)	Specify/cancel Chinese character mode
ESC s (1B 73 n1 n2)	Set 2 byte Chinese character left/right spaces
ESC t (1B 74 n1 n2)	Set 1 byte Chinese character left/right spaces
ESC r (1B 72 c1 c2 d1 dk)	Register Chinese download characters
ESC @ (1B 40)	Command initialization
ESC ? (1B 3F 0A 00)	Reset printer (execute self print)
